Anti-Retroviral Therapy

In January 2021, there were 675 people with HIV who were initiated on ART. The median CD4 of these patients upon enrollment was at 168 cells/mm³.

A total of 48,314 people living with HIV (PLHIV) were presently on ART as of January 2021. Most (96%, 46,483) were males. The age of reported cases ranged from 1 to 82 years (median: 32 years old). Ninety-five percent were on the first line regimen, 4% were on second the line, and 1% were on the other line of regimen.

Note: Due to reporting delay, data from the previous month (Dec 2020) with updated ART outcome were used for Bernardo SHC, Klinika Batasan, Imus RHW, Talisay CHO, and ESPH.

HIV/AIDS & ART REGISTRY OF THE PHILIPPINES

The HARP is the official record of total number of diagnoses (laboratory-confirmed), ART outcome status and deaths among people with HIV in the Philippines. All individuals in the registry are confirmed by the San Lazaro Hospital STD/AIDS Cooperative Central Laboratory (SACCL) which is the HIV/AIDS National Reference Laboratory (NRL) and DOH Certified Rapid HIV Diagnostic Algorithm - rHIVda Confirmatory Laboratories (CrCLs). Confirmed HIV positive individuals were reported to the DOH-Epidemiology Bureau (EB) and recorded to HARP. ART figures are counts of HIV positive adult and pediatric patients currently enrolled and accessing Antiretroviral (ARV) medication during the reporting period in 158 treatment hubs and primary HIV care treatment facilities that had reported in the HARP. This report did not include patients who have previously taken ARV but have died, left the country, have been lost to follow-up and/or opted not to take ARV. Lost to follow-up is considered once a person have failed to visit a treatment facility more than 3 months after the expected date of ARV refill.

HARP is a passive surveillance system. Except for HIV confirmation by the NRL & CrCLs, all other data submitted to the HARP are secondary and cannot be verified. Hence, HARP cannot determine if an individual's reported place of residence is where the person got infected, or where the person lived after being infected, or where the person is presently living. This limitation has major implications on data interpretation. Readers are advised to interpret the data with caution and consider other sources of information before arriving at conclusions.
