

**KNOWVAWdata**  
measuring prevalence of violence against women in asia-pacific

### As of May 2019:

- 31** out of 37 countries in the UNFPA Asia-Pacific region completed at least one violence against women (VAW) prevalence survey
- 8** countries have completed more than one national VAW prevalence survey with comparable methods
- 26** countries have national statistics on intimate partner violence
- 25** of these have data on all three forms of violence in the last 12 months for SDG indicator 5.2.1
- 19** countries have national statistics on sexual violence by non-partners
- 11** of these have data on sexual violence in the last 12 months for SDG indicator 5.2.2

## Key findings for Asia-Pacific

By country, the proportion of women who have reported experience of physical or sexual violence by an intimate partner in their lifetime ranges from 15 percent in Bhutan, Japan, Lao PDR and Philippines to 68 percent in Kiribati and Papua New Guinea.

The proportion of women who have reported experience of physical or sexual violence by an intimate partner in the past 12 months ranges from 4 percent in Japan to 46 percent in Afghanistan and Timor-Leste.

In most countries of the region, women are much more likely to have experienced intimate partner violence than to have experienced physical or sexual violence by someone other than a partner.

Cook Islands, Samoa and Tonga differ from other countries in that women are more likely to have experienced physical violence by perpetrators other than partners, such as by family members or teachers.

*The 2030 development agenda calls on us to leave no one behind. Women are most vulnerable to violence behind the closed doors of their own homes. Women have the right to live a life without violence.*

**Goal 5:** “Achieve gender equality and empower all women and girls.”

**Target 5.2:** “Eliminate all forms of violence against all women and girls in the public and private spheres, including trafficking and sexual and other types of exploitation”

**Indicator 5.2.1:** Proportion of ever-partnered women and girls aged 15 years and older subjected to physical, sexual or psychological violence by a current or former intimate partner, in the previous 12 months, by form of violence and by age.

**Indicator 5.2.2:** Proportion of women and girls aged 15 years and older subjected to sexual violence by persons other than an intimate partner, in the previous 12 months, by age and place of occurrence.

**Table 2. Proportion of women disclosing experience of partner and non-partner violence in countries in the UNFPA Asia-Pacific region, by May 2019**

Country	Year of data collection	Survey methodology	Geographical Coverage	Sample size	Age group	Intimate partner violence among ever-partnered women								Non-partner violence since age 15 among all women			
						Psychological violence		Physical violence		Sexual violence		Physical and/or sexual violence		Physical violence by non-partner		Sexual violence by non-partner

Data in the blue columns contribute to monitoring SDG indicator 5.2.1

Data in these columns are reflected in the map

Data in the yellow column contribute to monitoring SDG indicator 5.2.2

### General notes on map and tables:

This 2019 snapshot is the fourth annual edition of this publication.

The countries listed in the tables are those in the Asia-Pacific Region where UNFPA is present/working.

The data in the map and table 2 reflect the most recent (if available national) data collected with either the WHO methodology, the DHS-DV module, or the UNECE VAW module, from publicly available survey reports, updated in May 2019. The map and tables will be periodically updated and expanded to cover more countries, more studies and more types of violence. For the most recent data, refer to the website below.

n.a.: data not collected or not available in source report.

Three periods (...) indicate no known survey conducted or no results available yet.

The data for 'psychological violence' in these tables reflect the findings for acts of emotional violence without including controlling behaviours.

For Thailand, the prevalence rates are calculated as average for the two sites.

'Last 12 months' indicates the 12 month period prior to the survey interview. 'Lifetime' indicates whether violence ever occurred at some point during an interviewee's life.

*Disclaimer: The designations employed and the presentation of material on the map do not imply the expression of any opinion whatsoever on the part of UNFPA concerning the legal status of any country, territory, city or area or its authorities, or concerning the delimitation of its former frontiers or boundaries. The dotted line represents approximately the Line of Control in Jammu and Kashmir agreed upon by India and Pakistan. The final status of Jammu and Kashmir has not yet been agreed upon by the parties.*

*The depiction and use of boundaries, geographic names and related data shown on the map and included in lists and tables in this publication are not warranted to be error free nor do they necessarily imply official endorsement or acceptance by the UNFPA.*

### Sources of data:

WHO: WHO multi-country study on women's health and domestic violence (2005).

aWHO: Country studies that have replicated or adapted the methodology of the WHO multi-country study on women's health and domestic violence, publicly available.

aWHO/P4P: Adaptation of WHO methodology conducted in limited sites, as part of the Partners for Prevention Multi-Country Study on Men and Violence in Asia and the Pacific (2013).

DHS: Demographic and Health surveys (country reports that included a chapter on domestic violence).

UNECE: VAW surveys using (adaptation) of UNECE survey module (for UN statistical VAW indicators).

Prepared by Dr Henrica A.F.M. (Henriette) Jansen.
