RTI	Reproductive Tract Infections
SLN	State Level Network of HIV Positive Persons
SRL	State Reference Laboratory
STI	Sexually Transmitted Infections
TI	Targeted Intervention
VBD	Voluntary Blood Donation

HIV Epidemic in India – National Scenario

Estimated Adult HIV Prevalence

The adult HIV prevalence at national level has continued its steady decline from 0.41% in 2000 through 0.36% in 2006 to 0.31% in 2009. All the six high prevalence states show declining trend. However, the low prevalence states of Assam, Chandigarh, Orissa, Kerala, Jharkhand, Uttarakhand, Jammu & Kashmir, Arunachal Pradesh and Meghalaya show rising trends in the last four years.

Source: Technical Report on HIV Estimations, 2010, NACO & NIMS.

Estimated Annual New HIV Infections

New HIV infections has declined by more than 50% over the past decade from 2.7 lakh in 2000 to 1.2 lakh in 2009. Of these, six high prevalence states account for only 39%, while the states of Orissa, Bihar, West Bengal, Uttar Pradesh, Rajasthan, Madhya Pradesh and Gujarat together account for 41% of new infections.

District Categorisation for Priority Attention

District level focus is central to planning, implementation and monitoring NACP-III. Based on HIV prevalence in the districts among different population groups for three consecutive years 2004-2006, all districts in the country were classified in 2007 into 4 categories - 156 A, 39 B, 118 C & 296 D. NACP's organizational structure has been decentralized to implement programmes at the district level, with priority for 'A' and 'B' category districts.

Notes and Glossary

- 1. All the figures given under Epidemic Scenario section of the state fact sheets are estimated figures for 2009.
- 2. District Categorisation for Priority Attention: District level focus is central to planning, implementation and monitoring NACP-III. Based on HIV prevalence in the districts among different population groups for three consecutive years 2004-2006, all districts in the country were classified in 2007 into 4 categories 156 A, 39 B, 118 C & 296 D. NACP's organizational structure has been decentralized to implement programmes at the district level, with priority for 'A' and 'B' category districts. Definitions of the district categories are as follows.
 - a. **Category A:** More than 1% ANC prevalence (prevalence among pregnant women attending antenatal clinics) in district in any of the surveillance sites in the 3 year reference period.
 - b. **Category B:** Less than 1% ANC prevalence in all the sites during the 3 years with more than 5% prevalence in any high risk group surveillance site (STI patients/FSW/MSM/IDU).
 - c. **Category C:** Less than 1% ANC prevalence in all sites during the 3 years with less than 5% in all high risk group surveillance sites, with known hot spots (Migrants, truckers, large aggregation of factory workers, tourist etc).
 - d. **Category D:** Less than 1% ANC prevalence in all sites during the 3 years with less than 5% in all high risk group surveillance sites and no known hot spots OR no or poor HIV data.
- 3. Red Ribbon Clubs (RRC): Red Ribbon Clubs formed in colleges provide a forum for students to come together to share information on HIV/AIDS and safe behaviours, discuss related issues and also motivate them to participate in voluntary blood donation.
- 4. Adolescent Education Programme (AEP): The Adolescence Education Programme (AEP) is an intervention to build life skills of the young people and help them cope with negative peer pressure, develop positive behaviour, improve sexual health and prevent HIV infections. Under the programme, sessions are scheduled for sixteen hours for classes IX and XI.
- 5. **Drop-in-Centres (DIC):** DICs is a platform to provide PLHA psycho-social support, linkages with services and counseling on drug adherence, nutrition, livelihood and legal issues. They have been set up in A and B category districts and are managed primarily by PLHA networks.
- 6. **PLHA Networks:** Networks of HIV Positive persons and women are formed at national, state and district levels. Such Networks act as platforms for people living with HIV to share their concerns, seek support and legal aid. They address stigma and discrimination related cases among their members and also provide social support for those isolated by their family and community. The networks are encouraged to advocate and promote the utilisation of HIV related services.
- STI/RTI Services: Sexually Transmitted Infections/Reproductive Tract Infections increase the risk of HIV transmission significantly. STI/RTI services are aimed at preventing HIV transmission and promoting sexual and reproductive health under NACP-III and Reproductive and Child Health (RCH II) of the National Rural Health Mission (NRHM).
- 8. **Blood Safety:** Under the Blood Safety programme, blood banks across the country are supported and voluntary blood donation is strongly promoted to ensure that every blood unit collected is screened and is free from HIV and other infections.
- 9. Condom Promotion: NACO's Condom Promotion strategy focuses on two aspects: ensuring availability and creating demand for condoms. There are 2 channels of condom supply by the Government, namely free and socially marketing. Under the pogramme, free condoms are distributed to High Risk Groups through TI projects and and service delivery outlets such as ICTCs, STI Clinics etc. Under the Targeted Condom Social Marketing Programme, condoms are provided at subsidized rates for HRG as well as general population through traditional and non-traditional condom outlets, rural outlets, and outlets at TIs and truck halt points.
- 10. Link Worker Scheme (LWS): Link Workers Scheme is a community based intervention that addresses HIV prevention and care needs of the high risk and vulnerable population in rural areas by providing information on HIV, condom promotion and distribution, and referrals to counseling, testing and STI/RTI services.

- 11. **High Risk Groups (HRG):** Populations with high risk behaviour for contracting HIV. Include Female Sex Workers (FSW), Men who have Sex with Men (MSM), Injecting Drug Users (IDU), Single Male Migrants and Long Distance Truckers. The last two groups are also referred to as Bridge Population.
- 12. **Targeted Intervention (TI):** TIs are peer-led preventive interventions focused on HRG and bridge population, implemented by Non-Government Organisations (NGO) and Community-based Organisations (CBO) in a defined geographic area. They provide prevention services such as behavioural change communication, condom distribution, STI/RTI services, needle & syringe exchange, opioid substitution therapy, referrals and linkages to health facilities providing HIV/AIDS services, community mobilisation and creating enabling environment.
- 13. Core Composite TI: TI that provides prevention services to more than one high risk group.
- 14. The number of TIs mentioned in the document includes only NACO-supported TIs. Migrant TIs include source, transit and destination TIs.
- 15. **Counseling & Testing Services:** Integrated Counseling and Testing Centre (ICTC) is a place where a person is counseled and tested for HIV on his/her own volition (Client Initiated) or as advised by a health service provider (Provider Initiated) in a supportive and confidential environment. These centres are the entry points for reinforcing HIV prevention messages and linking HIV positive people to HIV care, support and treatment services. There are several contexts for providing HIV testing services voluntary counseling and testing, prevention of parent to child transmission, screening of TB patients and diagnostic testing among symptomatic patients.
- 16. **Prevention of Parent to Child Transmission (PPTCT):** Mother to child transmission of HIV may take place during pregnancy, during childbirth or through breastfeeding. To prevent this, under PPTCT programme, every pregnant woman visiting antenatal clinics or visiting hospital at the time of delivery are tested for HIV. If a pregnant woman is positive, she is closely followed up to ensure institutional delivery. At the time of delivery, the pregnant woman and the newborn baby are given single dose of Nevirapine to prevent mother to child transmission of HIV.
- 17. **Laboratory Services:** An extensive network of National Reference Laboratories (NRL) and State Reference Laboratories (SRL) provide quality control for HIV testing at blood banks and ICTCs under the programme, besides conducting test kit evaluation. Laboratory support is also provided for CD4 testing of positive individuals and DNA PCR testing of infants and children below 18 months of age.
- 18. The **Care, Support and Treatment programme** of NACP-III provides comprehensive management to PLHA with respect to prevention and treatment of Opportunistic Infections including TB, Anti-retroviral Therapy (ART), psychosocial support, home-based care, positive prevention and impact mitigation.
- 19. **ART Centres:** Free first line and second line Anti-Retroviral Treatment (ART) is provided to clinically eligible PLHA at designated centres across the country. As soon as a person is detected to be HIV positive at ICTC, he is referred to the ART centre for pre-ART registration. At the time of registration, all the baseline investigations are done including CD4 count (explained below). If the person is clinically eligible for treatment, he is started on first line ART. Otherwise, they are followed up every six months for CD4 count. The number of PLHA on ART mentioned in the document refers to those on first line ART at NACO supported ART centres. Another 30,000 PLHA are estimated to be receiving ART in private sector.
- 20. Link ART Centres: In order to facilitate the delivery of ART services nearer to the homes of beneficiaries, Link ART Centres, located mainly at ICTC in the district/sub-district level hospitals, were set up and linked to a nodal ART centre within accessible distance.
- 21. **Community Care Centres (CCC):** CCCs have been set up in the non-government sector with the objective of providing PLHA with psycho-social support, counseling for drug adherence and nutrition, treatment of Opportunistic Infections, home-based care, referral and outreach services for follow up, besides tracing patients lost to follow up (LFU) and those missing to get ARV drugs as per schedule.

- 22. CD4 cells are specialized T cells that are part of our immune system. In case of HIV, CD4 cells are the host cells that aid HIV in replication. HIV attaches to the CD4 cells, allowing the virus to enter and infect the CD4 cells, damaging them in the process. The fewer functioning CD4 cells, the lower the immune system and therefore, more vulnerable a person is to infections and illnesses. Knowing how many functioning CD4 cells are circulating in the blood gives indication of how strong the HIV positive person's immune system really is. CD4 machines are used to test blood sample for CD4 count in the blood.
- 23. **Finance:** The figures indicate the budget allocation, budget released and expenditure incurred by the state during the financial year 2011-12. The percent expenditure is calculated up on the budget allocation for the financial year 2011-12. The figures provided are provisional pending settlement and audit certification.

National AIDS Control Programme (NACP-III) aims at halting and reversing HIV epidemic in India by scaling up prevention efforts among High Risk Groups (HRG) and General Population and integrating them with Care, Support & Treatment services. NACP-III is a scientifically well-evolved programme grounded on a strong structure of policies, programmes, schemes, guidelines, rules and operational norms. The strategies to prevent HIV transmission and new infections include targeted interventions for high risk groups, link worker scheme for high risk and vulnerable population in rural areas, prevention and control of sexually transmitted infections, awareness generation, behaviour change communication and mainstreaming, condom promotion, ensuring access to safe blood, counseling and testing services for HIV and prevention of parent to child transmission. Care, Support and Treatment strategies include provision of free first line and second line ART to eligible HIV positive individuals and children, provision of nutritional and psychosocial support to HIV infected persons and their families, cross-referral, detection and treatment of HIV-TB co-infections, treatment of opportunistic infections, positive prevention and impact mitigation.

Strengthening the nationwide Strategic Information Management System is one of the four key strategies of NACP-III focused towards building up an effective response to HIV epidemic in the country. Strategic Information Management assists programme in tracking the epidemic and measuring the scale, reach and effectiveness of the programme response. It generates and manages crucial information on the level and spread of HIV and risk behaviours, implementation of interventions, reach of service delivery and access to beneficiaries.

Another key function under Strategic Information is to promote data use for advocacy, policy making, programme planning, implementation and review at national, state, and district levels. As a part of NACO's endeavour to disseminate programme information and promote data use by different stakeholders, this document titled 'NACP-III State Fact Sheets March 2012' has been developed. It consolidates the information on epidemic scenario and programme response at state level into a one page factsheet on each state, for easy and quick reference. The HIV estimates mentioned in the document are the latest available estimates on HIV epidemic, with reference year 2009. Programme statistics refer to the status at the end of February or March 2012. Notes and glossary are also added at the end that gives brief description of different services provided under NACP-III and mentioned in the Fact Sheets. The figures reflect the achievements of scale up at the end of five years of NACP-III.
