

Strategic Information on HIV: What are the gaps in Asia-Pacific?

Dr. Amala Reddy Regional Programme Advisor Strategic Information UNAIDS Regional Support Team Asia-Pacific 9th ICAAP Bali, August 2009

UNAIDS

What do we need to know to understand HIV epidemics in Asia-Pacific?

- How many people are at-risk of becoming HIV infected?
- What is the source of past and current HIV infections?
- Where is the epidemic going?
- Are HIV prevention and care efforts positioned for maximum impact now, and in the future?
- How much will prevention and care cost?
- Who do we have to influence and what will change their direction?

This translates to the need for Strategic information on:

- Populations most-at-risk and at lower risk
- Number of people at risk and vulnerable
- Trends in the levels and frequency of HIV-related risk behaviors – unprotected commercial and anal sex, shared injections
- Source of current and future new infections
- Coverage of interventions
- Resource needs
- Human resource needs
- Enabling laws and policies

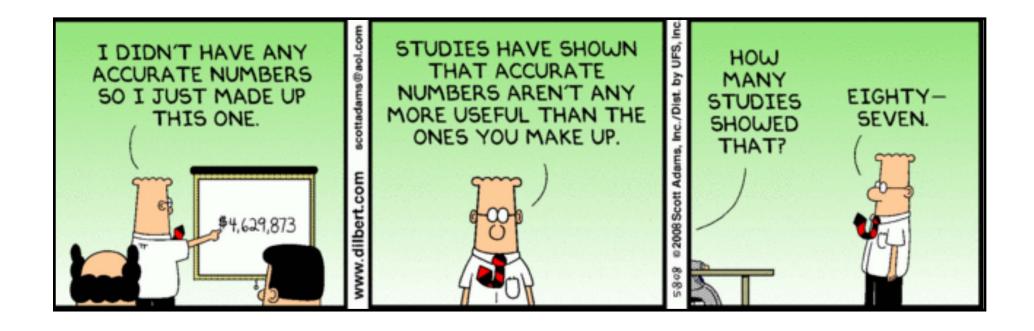

How do we find answers?

- Define people at risk IDU, FSW and MSW and their Clients, MSM, young people, women, and children
- Geographic mapping of risk
- Size estimation of sub-populations of varying risk
- HIV surveillance
- Behavioral surveillance
- HIV estimates and projections
- Scenario modeling
- Coverage measures
- Unit and Total cost estimates
- Operational planning
- Policy mapping

Are the data needs for these answers being met at present?

Recent meetings indicate ...

We don't have the data we need!

NSP Training, September 2008 WUNAIDS WITE WAS AND A WARREN OF WARR

#Countries	TA Requested
12	Size Estimation
11	Surveillance
9	Model Development (AEM, Spectrum etc.)
8	Geographic mapping of High Risk Groups
9	Unit Costing
9	M&E system development of MARPS
10	Revise/ further develop National Strategy and Operation Plan
9	Require external review of the NSP and NOP
7	Global Fund-related support
1	ART and Pediatric Care
1	Scaling up with or without decentralization
12	Human Resources capacity building
9	Multisectoral Coordination
6	Donor Coordination
7	Civil society Development and Participation
1	Public Private Partnership

UNAIDS Strategic Information Task Team, March 2009

- Regional Strategic Information Gaps defined:
 - Description of MARPs: definitions, size estimates (local and national), geographic distribution, trends
 - Human resource capacity: type, mapping against service need – both technical and geographic
 - Coverage and Quality of main interventions
 - Enabling environment
 - Estimation of resources needed
 - Use of data

Regional At-risk Populations Size Estimation Training July 2009

	# Countries
Countries participating	20
No Size Estimates of MARPs	5
Size Estimates of ≥ 2 MARPs	12
Size Estimates of IDU	10
Size Estimates of FSW	12
Size Estimates of Clients	5
Size Estimates of MSM	6
Size Estimates of MSW	3
No Size Estimates in last 3 yrs	12

UNAIDS

... and at other meetings:

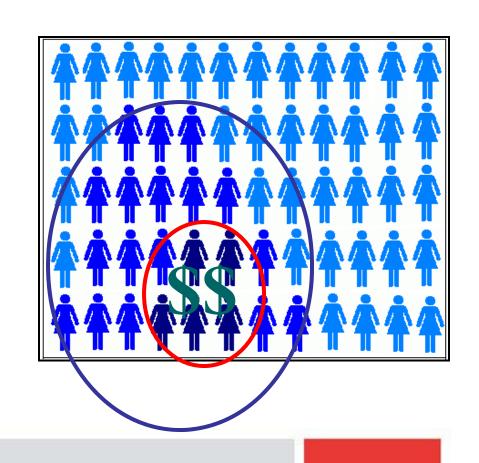

- Global Surveillance Meeting, Bangkok, March 2009
- Regional Estimates and Projections Training, Bangkok, March 2009
- Regional MSM Consultation, Bangkok, July 2009
- In-country technical meetings
- Donor consultations
- UN Regional Task Force meetings
- Etc. etc.

The most important country-level data gaps regionally are:

- Sizes of subpopulations at risk
- Coverage and outcome of risk group interventions
- Cost of interventions and national programs

The work ahead to fill the data gaps:

- ✓ Data collection
- ✓ Data analysis
- ✓ Data synthesis and triangulation
- ✓ Estimates and projections
- ✓ Training personnel
- ✓ Technical working groups
- ✓ Advocacy
- Collaboration and harmonization of efforts

Thank you!
